

ISS GLOBAL + EWS · BATTLEFIELD FORENSICS AND OPERATIONAL SUPPORT

30 years of trusted operational intelligence and global support

From Scene to Intelligence

EWS domain intelligence and ISS Global products turn raw observations into structured, actionable operational intelligence.

The value is not a collection of tools. It is one controlled workflow: collect, preserve, exploit, correlate, understand and act — with human judgement visible throughout.

EWS KNOWLEDGE ADVANTAGE

Specialist domain context and historical intelligence enrich the observation at source.

ISS PRODUCT MATURITY

Operator, Dfuze, Report Desk and Improved Threat Datasets provide proven support across capture, exploitation, analysis and reporting.

HUMAN-CONTROLLED AI

AI accelerates discovery while analysts retain judgement, challenge and approval.

ONE COLLABORATION. A MATURE PRODUCT LINE.

DFUZE

Structured records, relationships, audit history, controlled sharing and analytical review.

OPERATOR

Authorised field capture, geospatial context, media collection, offline working and secure transfer.

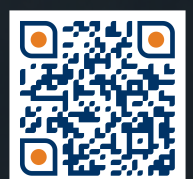

REPORT DESK

Selected open-source collection, contextual research and controlled transfer into Dfuze workflows.

IMPROVED THREAT DATASETS

Curated datasets of improvised threat indicators, TTPs and device characteristics to accelerate analysis and decision-making.

Optional EWS operational and domain intelligence can enrich the workflow at source; the ISS Global suite keeps that context usable through exploitation, review and reporting.

FIND OUT MORE

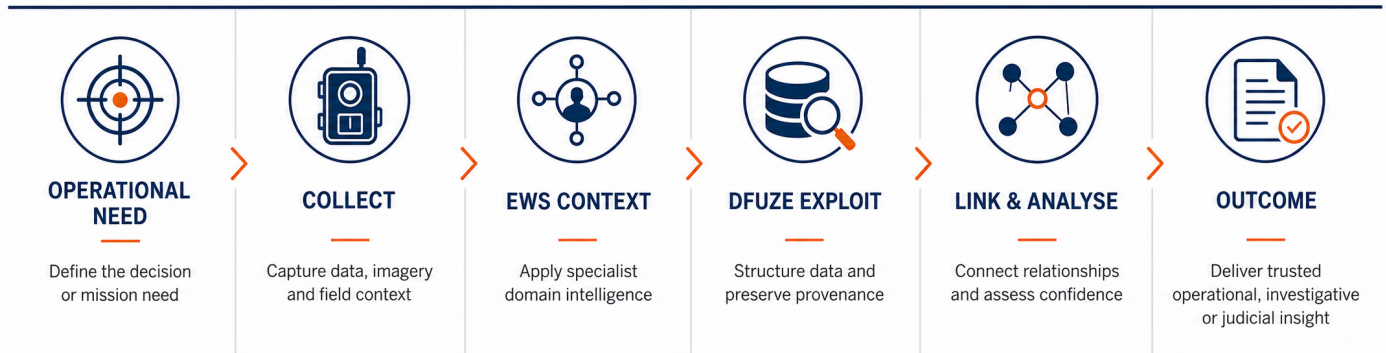

Turn information collected in the field into structured, analysable and reportable intelligence — with provenance, context and human judgement intact.

BUILT AROUND YOUR OPERATIONAL PRIORITY

Start with a relevant scenario, then show the route from raw observation to a trusted intelligence, investigative or evidential outcome.

HOW IT WORKS

From operational problem to a usable outcome

EWS

Knowledge that gives the observation meaning

EWS brings high-value operational material and specialist expertise to the point where it is most useful: before unstructured information becomes difficult to exploit.

- Domain context and recognised indicators
- Historical incident and technical intelligence
- Research, analyst insight and field relevance

ISS GLOBAL

Products that make information usable

The ISS suite provides a mature, controlled environment for collection, structure, exploitation, correlation and accountable reporting.

- **Operator:** authorised field capture and secure transfer
- **Dfuze:** structured exploitation, analysis and correlation
- **Report Desk:** contextual research and controlled reporting

**Your data.
Trusted insight.**

Bring together the data your teams already collect — source material, imagery, records and field context — and turn it into structured, connected and analysable intelligence. Preserve provenance through reporting so every output can support a clear operational, investigative or judicial outcome.

OUTCOMES

FASTER ASSESSMENT

Bring field observations and specialist context together earlier.

BETTER CONNECTION

Turn isolated records into relationships, patterns and confidence-led findings.

CONTROLLED HANDOVER

Keep provenance, permissions and limitations visible across teams.

ACTIONABLE OUTPUT

Deliver intelligence and reporting that supports a real decision or investigation.

NEXT STEP

Bring us your data challenge

In a joint capability workshop, identify where EWS expertise and the ISS product line can turn your existing data into faster, trusted insight.
