

ISS GLOBAL / WORLDWIDE INCIDENT ASSESSMENT

Worldwide IED Reporting Review

Attacks, recoveries, suspected devices and judicial developments

REPORTING / REVIEW WINDOW

28 September–7 October 2026 inclusive · Europe/London

ISSUE DATE

2026-10-08

A deduplicated review of public reporting, separating new explosive incidents, device recoveries, unresolved classifications and material developments in older cases.

26 register records: 13 reported IED events, 9 provisional or adjacent cases, and 4 historical judicial developments. These are review counts, not a complete global incidence total.

Prepared for ISS Global. Real geographic basemaps, source-associated imagery, native-language research and a numbered evidence register. Companion JSON preserves the incident records for examination.

READING DISCIPLINE

Reported IED does not mean independently proven attack. Allegation, discovery, detonation and conviction remain distinct throughout.

What happened and its threat significance

COUNTRY	WHERE	WHEN
Worldwide Multi-country public-source review	Asia, Middle East, Africa, Europe, the Americas and Oceania. Locations and country names appear in each record.	28 September–7 October 2026 Ten complete reporting days, Europe/London. Issue: 8 October 2026.

Reporting in the review period describes IED explosions, recoveries and disrupted activity affecting commercial premises, roads, security personnel, a humanitarian vehicle and a school environment. ^{[1] [4] [7] [8] [10] [11] [13] [14]}

What happened

Thai reporting documents two southern-province incidents; Iraqi officials reported a fatal legacy-device explosion; Indian police announced a mixed weapons cache including six IEDs; and Colombian reporting described two devices removed near a school. ^{[4] [6] [8] [13] [14]}

UK and Irish court reporting also advanced older bombing and attack-plan cases, adding evidential and judicial developments during the period. ^{[25] [26] [27]}

Threat significance

ISS Global assessment: the common concern is exposure across civilian and security settings, including indirect disruption to education, movement and aid delivery.

For Dfuze-related analysis, the useful unit is a sourced event linked to individual device objects, claims and later findings. Recoveries, detonations and court outcomes require distinct records.

EXECUTIVE JUDGEMENT

Prioritise civilian-exposure cases and preserve event-to-device provenance. The report’s central operational distinction is between active attacks, recovered devices, residual hazards and the judicial exploitation of older events.

A worldwide review, not a global census

Reporting window: 28 September 2026 at 00:00 BST through 7 October at 23:59:59 BST. Research was conducted on 8 October. Event dates remain local as reported; publication dates govern eligibility. A date without a publisher timezone is not assigned invented precision.

“All” is implemented as a deduplicated register of qualifying reports located in the reviewed public sources. No open-source search can establish complete worldwide incidence. The register is a **documented lower-bound review**, not an authoritative total, and may miss local-language, unindexed, delayed or inaccessible reporting.

REGISTER	RECORDS	MEANING
I / Reported IED events	13	Explicit IED or improvised-device reports, including allegations and one excerpt-only attack report. Not 13 independently confirmed attacks.
P / Provisional or adjacent	9	Unclassified explosives, alleged suicide incident, substances-only case and an unresolved recovery lead. Excluded from IED-event total.
H / Historical developments	4	Current court reporting about older incidents or preparations. Excluded from new-event counts.

Inclusion and deduplication

One event retains one ID across outlets and updates. Multiple devices in a cache are separate objects within that event. A later sentencing or recovery is not backdated into the news window as a fresh attack. Conventional munitions, UXO, airstrikes, fires and threats without an established device are not automatically IEDs.

Search coverage

English global and regional searches were supplemented by Arabic, Spanish, French, Russian, Thai, Urdu, Ukrainian and Somali queries. Substantive native-language material was examined in Arabic, Spanish and Russian; French and Thai official/indexed material provided additional checks. Urdu, Ukrainian and Somali searches did not supply an additional qualifying record retained here.

Regional searches covered South/Southeast Asia, MENA, sub-Saharan Africa, Europe, the Americas and Oceania. Coverage is strongest where accessible local or official reports were retrieved. Searches of Somalia, the Sahel and Myanmar did not establish additional eligible cases; that is a collection limitation, not evidence of absence.

COUNTING RULE

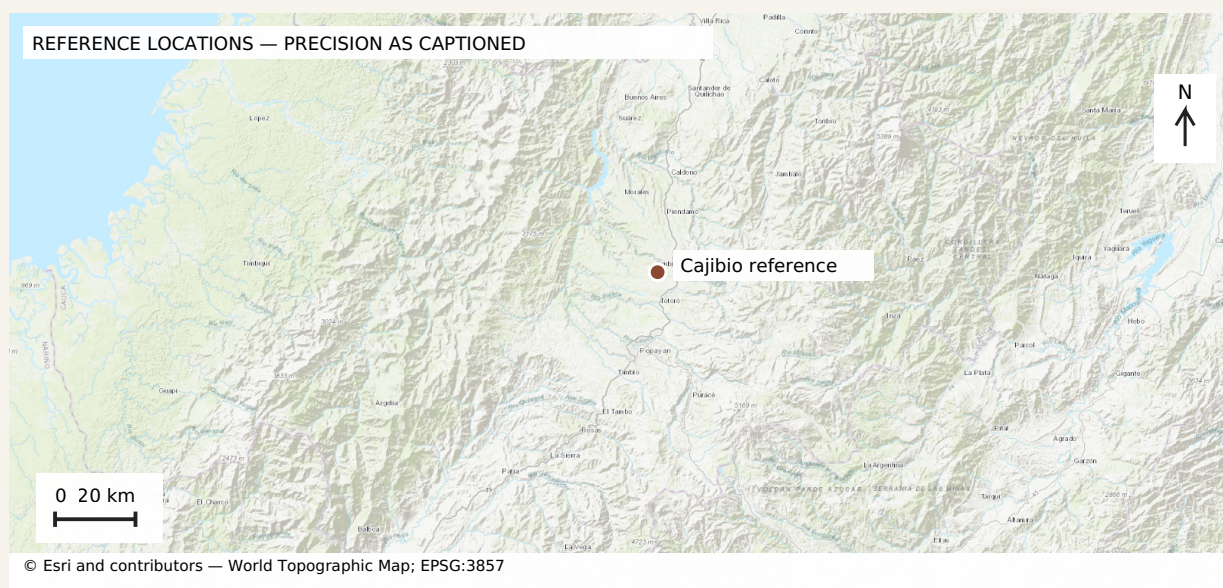

No global death toll, country ranking or escalation percentage is calculated. The available sources differ in device classification, access, casualty attribution and publication delay.

03 / LOCATION ATLAS

Two clusters in geographic context

Thailand. Pattani and Narathiwat regional context. Nong Chik reference: 6.843556°N, 101.178028°E. Marker identifies the district, not Sri Samai shop or device placement. The Tak Bai incident is separately described in I06. [4] [8] [31] [32]

Colombia. Cauca context. Cajibío reference: 2.6227°N, 76.5704°W. Marker is the town, not the rural school. Popayán is a distinct, unclassified-device case (P07). [14] [23] [31] [33]

Actual Esri basemaps acquired 8 October 2026. EPSG:3857 display; WGS84 input coordinates; north and scale shown. Scale bars independently checked against a separate spherical calculation. These selective context maps are not a worldwide incidence heat map or evidence of a shared network.

Recoveries and early-window incidents

I01 · Bangladesh — Sher-e-Bangla Nagar, Dhaka

Event: 28 Sep · **Reported:** 28 Sep · Recovery

Police described a mixed cache at the former trade-fair ground. A later itemized account totals 19 objects; an earlier report said more than 20. This is one recovery event, not 19 attacks. Incendiary objects remain separately classified. ^[1] ^[2]

I02 · Yemen — Shabwa; district printed as Tasab

Event: Not independently specified · **Reported:** 29 Sep · Reported dismantling

Aden Al-Ghad reported Shabwa police and military engineers dismantled a roadside IED. The account attributes placement to terrorist elements without identifying an evidential basis or named group. Province-level location only is retained. ^[3]

I03 · Thailand — Nong Chik, Pattani

Event: 30 Sep, early morning · **Reported:** 30 Sep · Detonation

An IED incident at Sri Samai Superstore on Road 43 was accompanied by a truck fire. Thai PBS gives about 01:00; the official Thai-language report gives about 00:10. Treat these as one event and retain the timing discrepancy. ^[4] ^[5]

I04 · India — Khordak Patton, Bishnupur, Manipur

Event: 30 Sep · **Reported:** 30 Sep · Recovery

Police reported six IEDs and one country-made drone bomb within a larger weapons seizure. Count one cache operation; six reported IED objects and the separately described aerial payload are not seven attacks. A recovered drone bomb does not establish that it was flown. ^[6]

ANALYTICAL READING

Dhaka and Bishnupur demonstrate why event counts and object inventories must remain separate. Mixed caches require item-level classification; neither an accompanying firearm nor an incendiary object should inherit an IED label automatically.

Vehicles, roads and disrupted activity

I05 · Syria — Jazrat al-Buhamid, Deir Ezzor countryside

Event: 1 Oct · **Reported:** 1 Oct · Detonation

A provincial forensic-security statement, reported by dpa in Arabic, attributed a vehicle fire at a checkpoint to an attached explosive device. Two people were reported injured. The attachment description is an official account, not independent technical examination. ^[7]

I06 · Thailand — Tak Bai, Narathiwat

Event: 1 Oct, about 21:00 · **Reported:** 2 Oct · Detonation

Thai PBS reported an IED in a motorcycle sidecar at a petrol station. Two employees sustained minor injuries and were treated and released. Witness descriptions and a reported wrecked sidecar support the public reconstruction; responsibility is not established. ^[8]

I07 · Pakistan — Mangochar, Kalat, Balochistan

Event: 1 Oct · **Reported:** 2 Oct · Attributed attack report

SATP, citing Frontier Files, reported a BLA IED attack that killed two security personnel. The accessible evidence is an indexed excerpt. Retain this as a low-confidence attributed incident, not a verified casualty or responsibility finding. ^[9]

I08 · Nigeria — Near Dalwa, Maiduguri–Damboa road, Borno

Event: 2 Oct · **Reported:** 3 Oct · Alleged disrupted emplacement

PRNigeria cited security and anonymous CJTF sources describing troops engaging suspected Boko Haram members during an alleged attempt to place roadside explosives. No device inventory was supplied. The reported gunfire encounter is not evidence that an IED detonated. ^[10]

ANALYTICAL READING

The records concern different evidential states: reported explosions, a low-confidence attack account, and an alleged attempt interrupted before a documented device recovery. Shared road or vehicle context does not establish common authorship.

06 / REPORTED IED REGISTER

Aid delivery, legacy hazards and civilian sites

I09 · Sudan — Dilling vicinity, South Kordofan

Event: 2 Oct · **Reported:** 6–7 Oct sources examined · Reported IED strike

Ayin reported that an IED hit a WFP truck after an aid delivery. France's statement separately acknowledges an explosive incident near Dilling on 2 October. Do not transfer the driver fatality from the following day's airstrike into this IED record. ^[11] ^[12]

I10 · Iraq — Southern Nineveh, north of Rawa desert, as reported

Event: 4 Oct · **Reported:** 4 Oct · Legacy IED detonation

The Defence Ministry, reported by Kurdistan24, said a device left by ISIS killed two soldiers and injured two during a search operation. This is a new explosion involving an allegedly old device, not evidence that ISIS recently emplaced it. ^[13]

I11 · Colombia — Rural school vicinity, Cajibío, Cauca

Event: Discovery date not explicit; placement alleged 11–14 Sep · **Reported:** 5 Oct · Recovery / destruction

Noticias RCN reported two IEDs found near a school, an evacuation and controlled destruction without casualties. A military officer attributed emplacement to the Jaime Martínez structure. Community dating is an allegation and predates the reporting window. ^[14]

I12 · New Zealand — Vehicle towing facility, Mount Eden, Auckland

Event: 5 Oct, about 18:30 · **Reported:** 6 Oct · Recovery

Stuff's police account, preserved by Counter-IED Report, describes an IED found in a stolen car transferred from Ellerslie to a Mount Eden facility. The nearby Maungawhau station is a location reference; no railway-targeting conclusion follows. ^[15]

I13 · Russia — Stary Oskol, Belgorod region

Event: Detention date not specified · **Reported:** 5 Oct · Official seizure allegation

Vedomosti relayed an FSB claim that a ready-to-use IED was seized from a detainee in Belgorod region. The alleged Ukrainian-service connection is not independently proven. A second arrest in Perm does not establish a second device recovery. ^[16]

Classification here describes what the source reports, not independent forensic confirmation. In particular, I07, I08, I12 and I13 carry access or attribution limitations that must travel with any exported record.

07 / REPORTED IMAGERY

Publisher imagery and its evidential limits

I03 / Nong Chik. Image published by Thai PBS World with its 30 September report. Publisher-associated scene image; photographer and original capture metadata not supplied in the examined page. Reproduced for incident analysis; rights remain with the source. ^[4]

I06 / Tak Bai. Image published with Thai PBS World's 2 October report. Association is editorial, not independent geolocation or forensic authentication. No explosive composition, initiation method or yield is inferred from damage. ^[8]

These images establish how the publisher illustrated its reports, not independently verified scene evidence. Their original capture dates and locations were not authenticated. No generated imagery is used. Device-level forensic photographs were not established for most records.

08 / CLASSIFICATION PENDING

Explosions are not automatically IEDs

P01 · Pakistan — Tank, Khyber Pakhtunkhwa

Event: 29 Sep · **Reported:** 30 Sep · Provisional

SATP reported a premature explosion killing an alleged suicide attacker. Affiliation and intended government target are attributed claims; available text does not establish the device configuration. ^[17]

P02 · Pakistan — Fateh Ali Bazar, Gwargo, Panjgur

Event: 3 Oct · **Reported:** 4 Oct · Unclassified explosive

Police reporting described two children killed and three injured. The device could have been a grenade, mine or other ordnance; improvised construction was not established. ^[18]

P03 · Philippines — Sinamar, Roxas, Isabela

Event: 4 Oct, about 09:00 · **Reported:** 4 Oct · Unclassified explosive

Inquirer's police account, excerpted by Counter-IED Report, reported four deaths and two injured minors. Device type remained unidentified; it is not a confirmed IED event. ^[19]

P04 · Israel / Jerusalem — Armon Hanatziv, Jerusalem

Event: 6 Oct, about 08:15 · **Reported:** 6 Oct · Suspected explosive device

Police suspected a criminal device attack after a vehicle explosion seriously injured a man and a boy. No improvised-device classification is established. Location naming does not resolve territorial status. ^[20]

P05 · United States — Pacific Avenue, Tacoma, Washington

Event: 5 Oct, evening · **Reported:** 7 Oct UTC · Bombing; type unresolved

KIRO reported a placed explosive damaging a bail-bond business, with people inside but no injuries reported by police. Eyewitness testimony supports an explosion, not a technical device classification. ^[21]

09 / CLASSIFICATION PENDING

Crime, suspected devices and materials

P06 · Ecuador — El Bosque, Machala

Event: 6 Oct, about 19:30 · **Reported:** 7 Oct · Explosive attack; type unresolved

Police reporting described damage to three homes without injuries from the explosion. Three deaths in the same article concerned a separate shooting in Las Brisas and are excluded from this event. ^[22]

P07 · Colombia — Alfonso López area, Popayán, Cauca

Event: 7 Oct, morning · **Reported:** 7 Oct, 16:06 Colombia · Explosive attack; type unresolved

Two police officers and three civilians were reported injured. An initial grenade account was not confirmed. The five injured are not assigned to a confirmed IED category. ^[23]

P08 · United Kingdom — Worle, North Somerset

Event: 30 Sep search; 3 Oct hearing · **Reported:** 4 Oct update · Explosive substances, not confirmed device

Police reported possession charges after suspected explosive substances and firearms were found. Charges do not establish guilt, an assembled IED or an attempted detonation. ^[24]

P09 · Israel / West Bank reference — Barta'a; exact jurisdiction unresolved

Event: Not established · **Reported:** 28 Sep · Unresolved recovery lead

A police-attributed indexed headline reports two explosive devices near a residential building. Full text could not be retrieved. Keep as a lead rather than infer construction, location precision or viability. ^[34]

BOUNDARY REVIEW · NOT IN THE TOTALS

A Suárez, Cauca report describes a 4 October explosion, but its displayed timestamp is 7 October at 22:32 Colombia: 8 October at 04:32 BST. Its URL carries a different date and it embeds a 5 October post. The available publication trail is inconsistent, so it is a retained lead, not an additional in-window IED record. The headline's lightning explanation remains a hypothesis. ^[30]

10 / NEW REPORTING ON OLDER CASES

Judicial developments are separate events

H01 · United Kingdom — Sidcup, south-east London

Event: 6 Dec 2023 · **Reported:** 2 Oct 2026 · Historical sentencing

Metropolitan Police reported a 15-year sentence for Kevin Rees over a homemade bomb that destroyed a ULEZ camera. This is a judicial update to a 2023 attack, not a new explosion. ^[25]

H02 · United Kingdom — Derry/Londonderry, Northern Ireland

Event: Jul 2017–Sep 2019 · **Reported:** 28 Sep 2026 · Historical appeal

The Irish News reported Noel Logan's conviction appeal concerning three pipe-bomb incidents. DNA interpretation is contested by the defence. One current appeal record must not become three current attacks. ^[26]

H03 · Ireland — Galway mosque plot; proceedings in Dublin

Event: 4–5 Nov 2025 · **Reported:** 5 Oct 2026 · Historical sentencing hearing

Court reporting described guilty pleas concerning a planned mosque attack and explosive-substance possession. It did not report a completed bombing. The hearing is the in-window development. ^[27]

H04 · Russia — Yaroslavl region

Event: Underlying conduct date unstated · **Reported:** 6 Oct 2026 · Judicial update

Interfax reported a six-year sentence over a planned IED attack at a former educational institution. It said the judgment was not yet legally effective. No new detonation is established. ^[28]

Why these reports belong

The user's scope concerns reports in the last ten days, not only explosions during that period. These developments therefore belong in the dossier, but not in a fresh-attack count. Link each proceeding to its historical event and preserve the current procedural status, including appeals and non-final judgments.

What the record supports—and what it does not

ISSUE	AUDIT DECISION
False current date	Search engines sometimes display a current site date beside an old story. Article-body dates and event chronology take precedence.
Source families	Counter-IED Report is a discovery aid, not independent corroboration of the source it reproduces. Local reports repeating police/FSB/army statements remain one underlying assertion.
Dhaka inventory	Later itemized account: 19 mixed objects; earlier estimate: more than 20. Preserve both and prefer the itemized account for object accounting, without treating every object as an IED. ^[1] ^[2]
Thai incident time	00:10 in official indexed Thai report versus approximately 01:00 in Thai PBS. Same locality/date; one event with unresolved time discrepancy. ^[4] ^[5]
Civilian casualties	Machala shooting fatalities and the fatal 3 October Sudan airstrike must not migrate into the separate explosive incidents. ^[11] ^[12] ^[22]
Fairford exclusion	Police said no IEDs had been found. This remains an investigation, not a confirmed IED recovery in this review. ^[29]

PIECES and evidence handling

Power, Initiator, Container, Explosive, Enhancement, System: leave fields unknown unless explicitly evidenced. Most current records support an event class and broad setting, not a complete device profile. “Drone bomb”, “attached device” and “sidecar IED” are source descriptions, not component specifications. Do not derive initiation or explosive chemistry from photographs.

ISS Global assessment: retain event ID, object count, original-language term, translation, source family, access status, casualty attribution and revision history. A reported association with an actor should be a qualified relationship, not a hard identity match. Preserve source corrections rather than overwriting the original statement.

Dfuze relevance is evidential organisation and traceable comparison. This report does not assert that any named agency uses Dfuze or that a similarity proves common construction. No construction, deployment or render-safe instructions are provided.

A ten-day news sequence, not an escalation curve

REPORTING DATE	MATERIAL LOCATED IN THE REVIEW
28 Sep	Dhaka mixed cache; Northern Ireland appeal; Barta'a recovery lead.
29 Sep	Shabwa dismantling report; Fairford no-IED correction.
30 Sep	Nong Chik explosion; Bishnupur cache; Tank premature-explosion report.
1 Oct	Deir Ezzor attached-device account.
2 Oct	Tak Bai report; Mangochar attributed attack; Sidcup sentencing.
3 Oct	Borno alleged emplacement disruption.
4 Oct	Nineveh legacy-device explosion; Panjgur and Isabela unclassified blasts; Worle court update.
5 Oct	Cajibío school-area recovery; Stary Oskol seizure allegation; Galway plot hearing.
6 Oct	Auckland recovery report; Jerusalem suspected device; Yaroslavl judgment; French Dilling statement.
7 Oct	Ayin Dilling account; Tacoma, Machala and Popayán reports.

Dates refer to reviewed publications, not a claim to have identified the first report globally. Event dates and source IDs are retained in the registers and accompanying data file. The timeline is derived from those records, not an independent incidence series.

Principal assessment

The sample shows varied exposure rather than a single global campaign: civilian sites and vehicles, security operations, alleged road emplacement and residual explosive hazards. Current recoveries in India and Colombia add object-level evidence to the news record, while historical prosecutions show how technical and digital evidence can acquire significance years later.

No increase, decrease or new global tactic can be established from this ten-day collection alone. A defensible trend analysis needs a comparable earlier window, stable language/source coverage, correction history and the same inclusion rules. Repeated reporting is not repeated attack activity.

NEXT COLLECTION PRIORITIES

Obtain original recovery inventories, laboratory classifications for P-series cases, casualty updates tied to the correct event, precise publication timestamps and accessible primary records for excerpt-only allegations. Prioritise those checks before making country-level risk comparisons.
